Equine Radiography Venture Series In Veterinary Medicine

The clinical findings need to guide radiography, e.g. a wound, swelling or positive regional analgesia needs to point to an area. Using imaging as a 'fishing exercise' is not a good idea because most changes observed on images may or may not be of clinical significance and their clinical meaning can be appreciated only in conjunction with ...

Equine diagnostic imaging | Veterian Key

Radiography is often the first method of diagnostic imaging used in the evaluation of lameness. The majority of radiographs of the distal portions of equine limbs are obtained with portable x-ray units. These units are small and relatively lightweight. These are low output units, typically in the range of 10- 30 mA and 70-90 kVp.

RADIOLOGY OF THE EQUINE LIMBS
